EDUCATION

CETYS Universidad

Bachelor of Science in Software Engineering

Graduating in July 2027

GPA 99/100

WORK EXPERIENCE

Dilato Infotech Limited

April 2026 – Present

AI-powered web platform for automated resume processing - Software Engineering intern

- Engineered automated pipelines leveraging the Gemini LLM API to parse and process unstructured documents, using model outputs to drive structured data decisions within the system.
- Designed and built full-stack features, from database schema modeling to REST APIs and frontend interfaces, for core platform workflows like organizational onboarding, user invitations and user management.
- Implemented token-based validation logic, user access control, and RESTful endpoints to support multi-tenant company workflows.
- Refactored code structure and database interactions, optimizing performance and reducing redundant DOM/API calls to improve overall system maintainability.
- Independently researched and implemented transactional email infrastructure using Resend API with no prior team knowledge of the tool, crafting responsive, dark-mode-compatible HTML/CSS templates with robust cross-client fallbacks.
- Participated in code reviews, providing constructive feedback to maintain code quality and consistency across the team's codebase.

Tourism Operations Coordination Platform – Pillovan

August 2025 – January 2026

B2B logistics coordination platform designed to streamline service dispatching and operational management within the local tourism industry – Freelance Software Engineer

- Designed and developed RESTful backend services using Node.js and Express to manage service dispatching, operational assignments, and administrative workflows.
- Implemented database schema design and data access layer using Prisma ORM with MySQL.
- Developed backend modules for service allocation, administrative management, and operational monitoring.
- Conducted API testing and endpoint validation using Insomnia.

MAJOR PROJECTS

Interactive AI Supported Training Platform – AURA

January 2026 – May 2026

1st Place SEMPRA INFRASTRUCTURE INNOVATION Winner

- Owned end-to-end development of RESTful backend services using Node.js, Express, and Prisma ORM with PostgreSQL, delivering a fully functional quiz, attempt tracking, and enrollment system to production for a live hackathon demo.
- Designed and developed frontend interfaces using React and TailwindCSS, integrating TanStack Query for server-state management and TanStack Router for protected navigation flows.
- Migrated course progress tracking from client-side storage to a database-backed system, ensuring cross-device synchronization and data persistence.
- Implemented server-side business logic to ensure data integrity and prevent client-side manipulation of user scores and progress.

Travel & Events Discovery Platform – QueHacerEn

January 2025 - May 2025

Web platform for discovering activities, events, restaurants, and points of interest across different cities.

- Developed a REST API using Spring Boot to manage users, events, locations, and reviews.
- Implemented CRUD operations and relational database design using PostgreSQL (Supabase).
- Designed backend services supporting search filters, reviews, and event management workflows.
- Performed API testing and debugging using Postman.

SKILLS

PROGRAMMING LANGUAGES

Java, TypeScript, Python, JavaScript

TECHNOLOGIES

HTML, CSS, React.js, Django, node.js, Express, socket.io, MySQL, PostgreSQL, Git, GitHub, Prisma ORM, Spring Boot, Supabase, Postman, Insomnia, Resend API, Gemini AI API, TailwindCSS, TanStack Query
